Full Height Pelmet

For an authentic
orangery style
internal soffit

global **summer**
Orangery style & elegance

The Full Height Pelmet creates a plastered soffit right up to the rafters and is available for both Global Summer and standard Global conservatory roofs.

Bridging the gap between full blown structural orangeries and standard conservatories, the Full Height Pelmet helps meet customers' aspirations and provides an opportunity to uplift margins and stand out from the competition.

Available to order now!

- Easy to fix galvanised steel framework
- Privacy film conceals soffit void
- Foam strip stops ingress of insects
- Suitable for downlights or speakers

Also available for **global**
conservatory roof

ISO Chemie

ISO Chemie likes to be beside the seaside!

Securing a reliable window seal in demanding coastal weather conditions has been achieved for a new build project using ISO-Chemie's high performance foam sealant tapes.

Timber-clad 'Merry Harbour' house has been built at West Wittering located about seven miles south west of Chichester on the Hampshire coast.

The property, which overlooks the Solent, will be exposed to the elements, particularly the ravages of wind-blown saltwater, so high performance products have been used to provide a reliable sealing solution for the Unilux triple glazed aluminium windows and bi-fold doors.

A further benefit will be the foam tapes' ability to accommodate movement of the timber framed structures without the cracking associated with silicone, creating a permanent 'adjustable' seal.

ISO-Chemie is one of Europe's main producers of impregnated foam sealants, specialising in the manufacturer of foam products from polyethylene (EPE), polypropylene (EPP) and polyurethane (PUR) using the latest production techniques. More at www.iso-chemie.co.uk

illbruck

illbruck trio keeps mum in Cheshire

A couple in Cheshire carrying out an exacting refurbishment project on an old property, located close to a busy road, have called on the assistance of tremco illbruck to help ensure that the finished installation of their high quality timber windows matched the manufacturer's specifications for both acoustic and thermal performance.

The work carried out by Mark Ridley and his wife on The White House, which backs onto the A537 at Chelford, was featured on Sarah Beeny's television series, explaining the many challenges overcome.

The refurbishment, including the installation of 17 Mumford & Wood casement windows, has been carried

out by the locally based firm of Access Builders. The firm received on site training from tremco illbruck in the correct use of the manufacturer's trio system; launched to help address the highest requirements on airtightness.

BIG WIPES

BIG Wipes Cleans Up In Hall 1A At Fit Show 2014

Wiping their way into the hearts of many at this year's FIT Show, successful industrial wipes specialist BIG WIPES proved to be a visitor favourite with one of the busiest stands at Telford's International Centre.

Located in Hall 1A there wasn't a moment when Brand Ambassador David Hawkins and the BIG WIPES team were not surrounded by a sea of interested parties keen to get their hands on the latest products from the Sycamore UK Ltd brand. With demonstrations aplenty and friendly faces always on hand to answer any questions that might have been asked, they were by far one of the

most popular exhibitors at the fabricator and installer trade show.

Easy to spot thanks to their vibrant stand decked out in yellow and the staff's loud and cheerful attire, a feel-good approach earned them a large amount of quality leads as well as a few fans. The Big Wipes team was constantly demonstrating the company's products providing a powerful lesson about how to make an exhibition stand work, drawing in visitors to the stand and then engaging them and easily gaining their interest in the products.

Dorma

Dorma Ensures Debenhams Flagship Store Is Ready For Shoppers

As part of a major £25 million refurbishment of a landmark Debenhams store on one of the busiest shopping streets in the world, the UK retailer had to ensure that customer entrances met their exacting requirements. With constant foot traffic, performance and durability of utmost importance, along with striking aesthetics, an automatic and manual door entrance package from DORMA, the trusted global partner for premium access solutions and services, was specified.

The first makeover in its forty one year history, Debenhams Oxford Street

external refurbishment has been designed by Archial Norr Architects in conjunction with artist Ned Kahn. As part of the redesigned 370,000 sq foot department store a significant feature will be an aluminium overcladding system that aims to create a 'kinetic façade' which moves and ripples in response to the wind.

For more information please visit www.dorma.com. All DORMA products are backed up by a nationwide team of service and maintenance engineers.
