Take abrasive action

19 April 2016

Incorporating the latest high adhesion web technology, the new Abrasive Quad Fabric from Big Wipes grips 40% more grime with every wipe, so you can mop up even the toughest dirt in the quickest time.

In 2014 Big Wipes launched its successful 4x4 range of industrial strength wipes, containing four powerful cleaning agents and four dermatologically tested skin conditioners. Now the 4x4 formula has been combined with the Big Wipes Heavy-Duty Quad Fabric to offer increased strength and greater absorbency, which makes them tougher in use and able to soak up extra grime.

The enhanced scrubbing power of the abrasive surface drives the 4x4 formula deep into the dirt to speed up cleaning. The smooth face now has an absorbency of 7.93 gr/gr, which equates to a fabric absorbing quality of almost 800%. This results in the muck being soaked up and trapped in the wipe, leaving your hands, tools and surfaces cleaner than ever.

The fibres of different denier grades are mixed in the layers: finer deniers for greater density and higher tensile strength, heavier deniers to break the smoothness and provide a rougher surface. This combination creates the texture of the fabric: soft and gentle, yet rough and durable. Dirt is hooked and held between the fibres and the 4x4 formula dissolves dirt and grime.

The new abrasive wipes are kind to your hands and the environment: no chemicals or preservatives have been added and the fabric is made from pure polymers, which is 100% recyclable.
