

A BARGAIN BUCKET

Big Wipes has introduced a new and reusable bucket, containing 300 industrial strength multi-purpose wipes.

Big Wipes 4x4 wipes are designed to easily shift all modern construction sealants, adhesives, paints, coatings and grime. Containing four cleaning agents and four dermatologically-tested skin conditioners, they are tough on grime, but also kind to hands.

The wipes are made from a three layered, non-woven quilted fabric – a highly absorbent fabric that captures liquid between the

fibres, minimising the number of cleansing wipes used for any cleaning job, says the company.

Tear resistant, lint-free and super tough, they can make light work of cleaning up hands, surfaces and tools after a mucky day out on site.

The range has been assessed to the latest EU Regulation 1223/2009 for cosmetic products, with zero levels of irritation recorded during controlled testing by dermatologists. It also offers 99.9% antibacterial protection. All Big Wipes are used without water and are therefore useful when on-site and for tradespeople on the move.

THE DAILY GRIND

Makita's six new heavy-duty mains angle grinders come in 110v and 240v formats, each with a 2,000w motor. Three machines have 180mm diameter wheels, while three have 230mm wheels.

They all feature durable motors for heavy duty operations and a rigid housing. Each has a flat top surface, which keeps the machine stable when the wheel is being changed. The lighter weight design offers a new style of side-grip that provides increased control and operator comfort, and a newly designed spindle lock that makes it easier to lock the wheel for changing when wearing work gloves.

The three new 180mm grinders will accommodate

Makita's GA7060 grinder

wheels of up to 6.5mm thick and run up to 8,500rpm. The GA7060R model features Makita's Soft Start torque control electronics and Anti Restart protection. This requires the operator to switch off the machine if the power source has been cut, eliminating the risk of the machine restarting without the operator being in full control.

The three 230mm models will run up to 6,600rpm and carry the same features as the smaller models, but with a lower maximum vibration rating of 6.5m/s² when grinding.
