

Big Wipes Hand Cream – a mighty defence against skin damage

Dry skin and cracked, painful hands are common among the trade, but Big Wipes comes to the rescue with a new, specially formulated hand cream.

Solvents, paints and varnishes all strip the skin of its natural oils and can be difficult to avoid when working on-site. Harsh substances can break the skin's protective barrier and contact dermatitis can develop with symptoms ranging from dryness, itching and redness to painful cracks, ulcers and filled blisters. Cracked and broken skin can also become infected.

Big Wipes Hand Cream, with its powerful combination of urea and alpha hydroxyl acids (AHAs), is a high performance treatment that rapidly relieves dry and rough skin, helps strengthen the skin's barrier function and improves its ability to absorb and hold moisture.

It is non-greasy and alcohol and fragrance free and is recommended by dermatologists to increase moisture concentration and improve skin texture, appearance and function.

Used regularly, Big Wipes Hand Cream helps restore the skin's smoothness, softness and flexibility, keeping it soft, supple and youthful – and bringing much needed relief to a dry, cracked skin.

In conjunction with Big Wipes 4x4 hand-cleaning wipes, Big Wipes Hand Cream keeps your skin in tip-top condition, so you can get on with the job.

Easy Access with Carl Kammerling's C.K MightyRod Set

Carl Kammerling International has introduced the C.K tools MightyRod Tool Box Cable Rod Set, an easy to store cable rod set aiding efficient cable installation in hard to reach spaces.

Supplied in a storage tube which fits most toolboxes, it includes 10 x 33cm rods, which, when combined, creates a total length of 3.3m, offering a convenient and robust alternative to full-length rods.

'Mighty-Fix' zinc plated steel connectors feature a slimline design and are glued, indented and crimped, making them able to withstand up to 375kg of tensile pull strength.

The 5mm nylon coated rods are manufactured with a high-sheen fibreglass and resin composite, creating optimal rigidity and flexibility, minimising snagging and splintering.

The set also offers customers a 5mm adapter and cable hook, a 190mm coiled steel flexi lead and a mini eye ring, providing everything needed for even the most difficult of cable routing tasks.

Charles Whitfield, New Product Development Manager at Carl Kammerling International, commented: "The new MightyRod Tool Box Cable Rod set encompasses all of the fantastic features of our standard 10m set in a scaled down size. With an easy-to-transport design and the ability to store this set in your existing tool box, they'll always be close at hand when out on a job."

Combymat – a new flexible underfloor heating system for laminate, carpet and vinyl floors

Heat Mat's 150W Combymat System is now available as part of their professional electric underfloor heating range.

The Combymat is earth shielded and constructed with 1mm heating cables, sandwiched between two aluminium layers, these layers are designed to dissipate heat out from the cables for an even floor temperature. This new system is available in sizes 1m²-15m² and each mat is 0.5m wide.

The Combymat is designed to provide sole source heating beneath floating laminate. The system is quick to install without the need for any levelling compound or wet trade. The mats are simply secured into place using an aluminium-tape and must be fitted onto 6mm Combymat foam underlay.

If the system is combined with new fitting accessory Overlay Boards, floor finishes such as carpet and vinyl can be installed on top. Overlay boards are made from MDF and also assist with spreading out the heat, whilst providing a firm base to fit the final floor covering onto.

The 150W Combymat system is available now from Heat Mat with free next day delivery.

For more information, a quote or details on stocking these products please contact Heat Mat's award-winning customer service team on 01444 247020.

Debox 2 SL tool-free in-line junction box slashes installation time

IP20 protected; suits lighting and power applications

Debox 2 SL is the UK's first 100% tool-less junction box. Assembly takes just a few seconds – unlike competing products, Debox 2 SL is supplied complete with all components needed to join flat or round profile cable, including a UL and VDE-approved 4-pole terminal block.

The installer always has everything he needs immediately to hand, there's no need to hunt for a terminal block, dropped screw or missing fixing ever again.

Debox SL uses a ratchet arm to secure the cable within the junction box, which provides secure cable retention. A fixing pin is used in place of a screw, clipping the lid in place quickly and efficiently. Finally, two mounting ears are included which allow the Debox to be securely fastened in place, relieving tension from the cables.

Debox 2 SL junction boxes are maintenance-free and constructed from white polypropylene. Flame retardant to UL940V 0, they conform to the EN60598-1 (13.3.2) Glow Wire Test and are IP20 protected.
